
Flogas Britain considers the health, safety and security of our employees, the integrity of our assets, the protection of the environment and the quality of our service to be integral to the efficient management of our business.

We put SAFETY F1RST in everything we do and we recognise that Process Safety Management (PSM) is essential to maintaining the integrity of our assets and that all injuries, illnesses and incidents arising from failures of our assets are preventable.

Given the nature of the risks involved in our operations, ensuring the safety and integrity of our assets is critical to the sustainability of our business long term. Process safety focuses on the potential within our business for major accidents such as fires, explosions, and accidental chemical releases – and the controls we put in place to prevent these. Good process safety management means making sure our facilities are well designed, safely operated, properly inspected and maintained to prevent any major incidents which could place our people, neighbours, customers, the environment or business at risk.

We are committed to:

- Understanding our process safety risks and managing them effectively
- Managing change and recognising how it impacts on process safety
- Assessing and maintaining the integrity of all assets, plant and equipment
- Training our employees in process safety and promoting a culture in which everyone understands the part they can play to help contain process safety risks
- Maintaining appropriate standards and mitigating risks to prevent or manage undesired events
- Learning from events to prevent reoccurrence

To meet these commitments, we will:

- Develop and implement a systematic approach to process safety and asset integrity management and assurance.
- Make the appropriate level of investment to maintain asset, plant and equipment integrity
- Ensure all directors, managers and employees are aware of and deliver their process safety roles and responsibilities

- Ensure compliance with all relevant current and future legislation and where relevant, endeavour to be compliant with appropriate codes of practice.
- Regularly measure, appraise and report on the effectiveness of our control measures and our performance
- Periodically review the suitability and effectiveness of this policy, our management systems and our targets and objectives

Key to this is our use of a suite of Process Safety Performance Indicators (PSPIs). PSPIs are a proactive and effective approach to the continuous monitoring of process safety systems and asset integrity. They help us to identify deficiencies and provide an early warning when things are not working as expected.

Whilst ultimate responsibility for process safety and asset integrity within Flogas Britain lies with the Managing Director, everyone in Flogas Britain must understand the part they play to help contain process safety risks and that this is part of our everyday work. The Board and the senior management team has overall responsibility for the application of this policy and for ensuring that the risks and impacts arising from our activities are understood and mitigated, so far as is reasonably practicable. It is, however, also the responsibility of all employees to be aware of potential process safety or asset integrity risks and to help to reduce these in their working environment.

This policy statement applies to our employees, contractors who work with us, and anyone else who may influence our management of process safety or asset integrity.

Together we put SAFETY FIRST.

Lee Gannon
Managing Director
